                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    939
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               821
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a novel recombinant nucleic acid comprising a nucleotide sequence selected from any of the 660 sequences fully defined in the specification. A polynucleotide of the invention has cytostatic activity, and may have a use in gene therapy, or in a vaccine. The recombinant nucleic acids and polypeptides are useful for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              carcinomas, lymphomas,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       carcinomas, e.g. lymphomas, cancers, neoplasm, adenocarcinoma, and sarcomas. The present sequence represents a mouse gene of the invention.

The invention relates to recombinant carcinoma associated (CA) nucleic acid sequences from mouse and human (ADA01482-ADA03094), and to recombinant carcinoma associated proteins (CAP) encoded by them. The invention also encompasses expression vectors and host cells comprising a cinvention also encompasses expression vectors and host cells comprising a character acid, a polypeptide (especially an antibody) that specifically comprising CA nucleic acid or fragments thereof. The sequences of the invention were identified using concogenic retroviruses, which insert into the genome of the host organism or transform. Many of these do not carry transduced host oncogenes or pathogenic retroviruses, which insert into the genome of the host organism or transform. Many of these do not carry transduced host oncogenes or pathogenic trans-acting viral genes, meaning that cancer incidence is a direct consequence of the effects of proviral integration into host pathogenic trans-acting viral genes, meaning that cancer incidence is a carcinoma (especially breast cancer, prostate cancer, lymphoma or length of the propensity to carcinoma by determination of the sequence carcinoma of especially determination of CA gene expression in particular tissues. CA nucleic acids, proteins and antibodies are also useful as therefore of the invention. Note: The complete sequence data for this sequence of the invention. Once: The complete sequence data for this patent did not format directly from MIPO at the pathned and interestly from MIPO at the pathned and antibode and antibode and interestly from MIPO at the pathned and antibode and antibode are also useful as equence of the pathned and antibode sequence of the pathned and antibode and antibode and antibode and antibode and antibode and antibode and antibode and antibode and antibode and antibode and antibode and antibode and antibode and antibode and antibode and antibode and antibode and antibode and antibode and antibode and antibode and antibode and antibode and antibode and antibode and 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Mouse; murine; carcinoma associated; oncogene; carcinoma; cancer; breast; prostate; lymphoma; leukaemia; cytostatic; gene therapy; drug screening;

in the specification. A polynucleotide of the invention has cycustation activity, and may have a use in gene therapy, or in a vaccine. The recombinant nucleic acids and polypeptides are useful for treating carcinomas, e.g. lymphomas, cancers, neoplasm, adenocarcinoma, and sarcomas. The present sequence represents a mouse gene of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        10006 Actricterradriticacretericicidriticaetricicatri-crafearcreticatrica

                                                                                                                                                                                                                                              The invention relates to a recombinant nucleic acid comprising a nucleotide sequence selected from any of the fully defined carcinoma-associated (CA) genes from the 50 tables given in the specification. The CA proteins are secreted, transmembrane or intracellular proteins. The recombinant nucleic acids are useful for screening for drug candidates for diagnosing or treating carcinomas. Sequences given in ADC85215-ADC85514 represent CA genes of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          cirriagramacriricririaargaargricearrecerricearririsgagrararreag

New recombinant nucleic acid comprising a nucleotide sequence of ar
the carcinoma-associated (CA) genes, useful for screening for drug
candidates for diagnosing or treating carcinomas.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        124;

The present invention provides the protein and coding sequences of cDNAs isolated from human, wurtine and rat skin cell libraries. The sequences can be used in the development of therapeutic agents useful in the treatment of skin diseases, including skin wounds, cancer, growth defects, developmental defects and inflammatory diseases. The proteins have important roles in the induction of hair growth, cell proliferation and cell-cell interaction, in maintaining tissue integrity, in wound healing and in modulating immune responses. The present sequence is a cDNA of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Arcciferefricertricertriarrarecrificaaeceresarrearsaaaana

The invention also comprises a nucleic acid construct for use in producing the invention also comprises a nucleic acid construct of and/or metabolism and/or behavior of a drug in an animal of interest, comprising administering a test agent to the transgenic animal of and conducting analytical tests to determine drug metabolism and/or behaviour. The transgenic animal is useful in studying drug metabolism conducting analytical tests to determine drug metabolism and/or behaviour. The transgenic animal is useful in studying drug metabolism conducting the above transgenic animal and the methods are used for producing, breeding and using transgenic animal and the methods are used for the pharmacokinetic or pharmacodynamic assays) and/or toxicological studies. Nucleic acid sequences used within the invention are serum albumin, alpha-acidic glycoprotein, cytochrome P450 (CYP); uridine albumin, alpha-acidic glycoprotein, cytochrome P450 (CYP); uridine albumin, alpha-acidic sequences used within the invention are serum albumin, alpha-acidic glycoprotein, cytochrome P450 (CYP); uridine albumin, alpha-acidic sequences used within the invention are serum albuming metabolism and (MRP's). The present sequence represents a DNA sequence used to create a transgenic animal within the scope of the invention

nucleotide sequence which is a polymorphic variant of a reference sequence for the alchyde dehydrogenase 5 family, member Al (succinate sequence for the alchyde dehydrogenase 5 family, member Al (succinate sequence for the alchyde dehydrogenase 5 family, member Al (succinate sequence for the alchyde dehydrogenase 5 family, member Al (succinate polypeptide is useful for screening for drugs targeting it by contacting the ALDH5Al polymorphic variant with a candidate agent and assaying for binding activity. The polypeptide and haplotypes are useful for care also useful for studying expression of the ALDH5Al isogenes in vivo, are also useful for studying expression of the ALDH5Al isogenes in vivo, for in vivo screening and testing of drugs against ALDH5Al protein and for in vivo screening and testing of drugs against ALDH5Al protein and for in vivo screening and testing of drugs against ALDH5Al protein and for the ALDH5Al protein and in vivo, and metabolic diseases in a biological system. Antibodies are useful for diagnostic and prognostic formats and the antibodies are useful for diagnostic and prognostic formats and the antibodies are useful for diagnostic and prognostic formats and contion, for immunoflucrescence techniques. The polymocleotide is useful for gene therapy and antisense gene therapy. This sequence is useful for gene therapy and antisense gene therapy. This sequence sequence on which polymorphic sequences encoding isoforms of the ALDH5Al protein are based, described in the method of the invention invention describes an isolated polynucleotide comprising a Fig 1; 151pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to a method for predicting a toxic effect
of a compound. The method comprises preparing a gene expression profile
of a tissue or cell sample exposed to the compound, and comparing the
gene expression profile to a database compound, and comparing the
differential expression of the gene indicates at least one toxic effect.
The method is useful for predicting at least one toxic effect of
compound, predicting hepatocoxicity or the progression of a toxic effect of
a compound, identifying an agent that modulates the onset or
progression of a toxic response, predicting the cellular pathways that a
compound modulates in a cell, and identifying an agent that modulates at
least one activity of a protein. The method and compositions of the
present invention using a database of genes having liver toxin-induced
differential expression, are useful in identifying toxicity markers in
liver tissues or cells for drug screening and toxicity assays. Note: The
sequence data for this patent did not form part of the printed

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to a method for predicting a toxic effect of a compound. The method comprises preparing a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising SEQ ID 1-4925, where differential expression of the gene indicates at least one toxic effect. The method is useful for predicting at least one toxic effect of a compound, identifying an agent that modulates the onset or progression of a toxic response, predicting the cellular pathways that a compound modulates in a cell, and identifying an agent that modulates at least one activity of a protein. The method and compositions of the present invention using a database of genes having liver toxin-induced differential expression, are useful in identifying toxicity markers in sequence data for this patent did not form part of the printed sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     18877 ATATATATATATATCTGTTAAGTCCATTTGTTCCAAGTTATAGTTTAAATCCATTGTT 48818
                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to methods of diagnosing breast cancer in a patient, which comprise detecting the level of expression in a tissue sample of two or more genes selected from those shown in ABT09867-ABT1112, where a differential expression of the genes indicates breast cancer. The methods are useful in diagnosing, treating, detecting the progression, and in monitoring treatment of breast cancer in patients. The methods are also useful as a screening tool for agents that modulate the onset or progression of breast cancer. The breast cancer genes may be used as adapostic markers for the prediction or identification of the malignant state of breast tissue, for confirming the type and progression of cancer, and for drug screening and assays. The present sequence is a coding sequence of the invention. Note: The sequence data for this patent directive formed in wellow at the prediction, but was obtained in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          14;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          607

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1067
fibrosis, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease (COPD), and cancers such as leukaemias, lymphomas, carcinomas, and cancers which may metastasise to the lungs, including breast and prostate cancer. The reduction of the adenosine content of the ONs reduces side effects. The A-containing ONs break down with the release of deoxyadenosine which activates adenosine receptors causing bronchoconstriction and inflammation. AAA32313 to AAA35312 represent the nucleotide sequences given in the sequence listing from the present the nucleotide sequences given in the sequence listing from the present the from the previously named sequences. SEQ ID NO:11 to 185, and then the last 185 sequences are also called SEQ ID NO:1 to 185, but the sequences differ from the previously named sequences. SEQ ID NO:11 to 1600 (AAA32323 to AAA3392) are specifically claimed ONs from the present invention. N.B. Sequences given in the disclosure of the present invention on match up with their corresponding SEQ ID NO: sequences given in the sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         417

oligonucleotide (ON) with low adenosine (up to 15%), which targets nucleic acids involved in bronchoconstriction, allergies, and/or inflammation. The ON can have antinilammatory, antiallergic, antiasthmatic, cytostatic and analgesic activities. The compositions are useful for the treatment of diseases associated with inflammation, impaired airways, including lung disease and diseases whose secondary effects afflict the lungs of a subject. They can be used for treating e.g. ischaemic conditions, pulmonary vasoconstriction, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic

Low adenosine (A) content antisense oligonucleotides which do not trigger adenosine receptors during metabolism, useful e.g. for treating cancers and respiratory obstructions.

Disclosure; Page 978-991; 1592pp; English.

The present invention describes low adenosine (A) content antisense oligonucleotides and compositions (I) comprising them. In the antisense coligonucleotides the A is replaced by a "Universal" or alternative base. (C) can have respiratory bronchodiator, antiinflammatory, analgesic, immunosuppressive, antiasthmatic, hypotensive and cytostatic activities. The antisense oligonucleotides and (I) can be used to down-regulate the expression and or activity of target polypeptides associated with cativiting peptide factors and transmitters, transcription factors, immunoglobulins and antibodies, antibody receptors, cytokines and chemokines, endogenously produced specific and non-specific enzymes, immunoglobulins and antibodies, antibody receptors, cytokines and chemokine receptors, adenosine receptors, binding proteins, adenosine receptors, bradykinin receptors, central cereptors, canditiers, defensions, gradensine receptors, bradykinin receptors, central certors and peripheral nervous and non-nervous system peptide transmitters, defensions and malignancy associated proteins. The antisense oligonucleotides may be used in this way to treat disorders including proteins and malignancy associated proteins. The antisense oligonucleotides may be used in this way to treat disorders and creeptors, binding proteins and malignancy associated proteins. The antisense oligonucleotides may be used in this way to treat disorders and creeptors, binding proteins and malignancy associated proteins. The antisense oligonucleotides may be used in this way to treat disorders and condition selected from pulmonary vasociated with a disease or condition selected from pulmonary vasociated with a disease or condition, emphysema, chronic obstructive pulmonary disease (OPPD), plimonary transplantation rejection, pulmonary infections, bronchitis, and/or encer AAF18434 to AAF21843 represent human polynucleotide fragment invarion the present invention

```
The invention relates to a novel pharmaceutical composition, which has a first active agent comprising an oligonucleotide antisense to the instraction codon, coding regalon, 5' or 3' end genomic flanking regions, 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of junctions of genes encoding a polypeptide associated with lung and/or nasal airway dystunction and a second active agent comprising an antiinflammatory steroid and ubiquinone. A composition of the invention has antiinflammatory, antiallargic, antiathmatic, hypotensive, immunosuppressive, and cytostatic activity. The composition may have a use in antisense gene therapy. The composition is useful for treating or preventing a respiratory, lung or malignant disease or condition, also for enhancing the prophylactic or therapeutic respiratory effect of an preventing sensitivity to adenosine, reducing levels of ubiquinone or ceceptor, producing bronchodilation, increasing levels of ubiquinone or lung surfactant in a subject, for reacting bronchoconstriction, lung inflammation, lung allergies, or a respiratory disease or condition. Note: The sequence date for this patent is not represented in the printed or specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                            Pharmaceutical composition for treating ailments associated with impaired respiration, has oligo(s) antisense to specific gene(s) or its corresponding RNAs, and glucocorticoid or non-glucocorticoid steroid or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 56583 BP; 16610 A; 11169 C; 11927 G; 16877 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence encodes a beta-tubulin antigen. The protein is an antigen of the membranous structure of the inner ear protein, and is reactive with antibodies from patients having Meniere's disease. Seminater's disease is a chronic ear disease with unknown etiology. Serum from patients suffering from this disease contain autoantibodies against a 30 kbs cochlear protein antigen. The disease is believed to be an autoimmune disease. The beta-tubulin antigen is useful as a target substance in diagnosing or detecting Meniere's disease and in distinguishing this disease from other autoimmune ear diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New beta-tubulin antigen in the membranous structure of the inner ear, reactive with antibodies of patients with Meniere's disease, for diagnosing Meniere's disease and distinguishing this disease from other autoimmune ear diseases.

The invention relates to detecting (MI) granulocyte (GC) activation (GCA), by detecting the level of expression of gene (s) (GS) identified by DNA chip analysis as given in the specification, and comparing the expression level to an expression level in an unactivated GC, where expression of GS is indicative of GCA. Also included are modulating (M2) GA by contacting GC with an agent that alters the modulating (M2) GA by contacting GC with an agent that alters the capable of modulating GCA or an inflammation (especially chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease using the gene expression of pathogen or sterile inflammatory disease, by detecting the level of expression of the gene is indicative of inflammation; (a) detecting (M3) an inflammatory disease, by detecting the level of expression in a sample of the tissue of gene(s) from Gs, where the level of expression in a sample of the tissue of gene(s) from Gs, where the level of expression of the gene is indicative of inflammation; (MS) an inflammation (especially chronic) or in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammation of especially chronic) or in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammation in a tissue, by contacting of gene(s) from Gs in the tissue, millammation in a tissue, of modulating GCA preferably in an agent capable of modulating GCA preferably in an exposure of a subject to a pathogen or sterile inflammation (especially chronic) in a tissue, an allergic response in a subject, confired to pathogen or sterile inflammation in a tissue, and allergic response in a subject to a pathogen or sterile inflammation confired confired confired confired provided in granulocytes. Note The sequence data for this patent did not format directly from the presents aguence expressed in granulocytes. Note The sequence data for this patent did the confit defection format dir
                                                                                                                                                                                                                                                                                                                                         Detecting granulocyte activation by detecting differential expression of genes associated with granulocyte activation, which serves as diagnostic markers that is useful for monitoring disease states and drug toxicity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       298 TCTIGATTTCTATCTIGGCTCATTTTTAACTCAGTAGTGAGTTGTTTGGTTTCCATAAGT

```
Isolated nucleic acid molecule encoding a reproductive system antigen is used in preventing, treating or ameliorating a medical condition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention provides the protein and coding sequences of a number of human reproductive system related antiques. These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoding a protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 32167 BP; 10519 A; 6697 C; 6488 G; 8463 T; 0 U; 0 Other;

[amily, termed DC-associated C-type lectin.2. (see AAM83010), that is essential for DC-mediated T cell activation. This novel gene is expressed selectively by long-term DC lines (XS series) from murine epidermis. Competion.2 CMN (see AAM42599) has also been isolated. The invention provides: dectin.2 cmN (see AAM42599) has also been isolated. The invention provides dectin.2 cmN (see AAM42599) has also been isolated. The invention provides dectin.2 cmN (see AAM42599) has also been isolated. The invention provides to the for purifying T cells, for detecting automatibodies and for up-regulating immunity e.g. as vaccine adjuvants; dectin DNA (see AAV42598-60); expression vectors; recombinant host cells; probes and primers useful e.g. for identifying human dectin.like molecules (see AAV42569); antibodies; compounds that modulate dectin e.g. for identifying human dectin ligands. Dectin expression and for drug screening; and dectin ligands. Dectin expression and for drug screening; and dectin ligands. Dectin expression and feetin expression is useful for treating allergy and autoimmune disease. Alternatively gene disruption is done in vitro, the call pulsed with an antigen, and returned to the patient to provide long term non-responsiveness to the antigen. The dectin expression is useful for treating the professional antiquen. The dectin dectin expression to DC. Since DC are 'professional' infinite to larget gene expression to DC. Since DC are 'professional' infinite to larget.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1385 AGAAAGTITITICIDAAGIGCAGTAGTCIGGCCIGACATCIGIAGTCICTIGGAGTCIGIAG 1444

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   8
                                                         à
                                                                                                                                                                                                           The invention relates to a 3711 bp region of the mouse tyrosinase gene referred to as the locus control region (LCR; ABV7677), and its functional fragments and analogues (ABV76779), and its functional fragments and analogues (ABV76779), and its functional fragments and analogues (ABV76779), and plays a gene from which the LCR is derived is located on chromosome 7 and plays a role in pigmentation. A portion of the full-length LCR sequence, designated HS (ABV76779) was identified as a DNsei hypersensitive region that was found to be deleted in the mutant tyrosinase allele chinchilar mottled, which confers a variegated pigmentation phenotype. The full-length LCR, or its functional fragments or analogues may be incorporated into animal cell expression constructs to protect against the effects of transgene integration at different locations in the genome. The LCR-derived sequence reduces the variability of transgene expression associated with integration at different chromosomal locations, and ensure tyrosinase gene locus control region X. This region corresponds to bases 222-2617 of the full-lent LCR, and retains its protective effect against variable transgene expression. Note: The present sequence is not shown as an isolated sequence in the specification, but is obtained from the the full-length LCR sequence shown on page 54-55 and the information given in claim 4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 12;
                                                                                                New DNA segment with insulating activity, useful for reducing the variation of transgene expression, in animal cells, caused by integration at different genomic locations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   619
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   843
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           471

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        셤
                                                                                                                                                                                                                                                                               The invention relates to a 3711 bp region of the mouse tyrosinase gene referred to as the locus control region (LCR; ABV76771), and its cuntional fragaments and analogues (ABV76772), and its control functional fragaments and analogues (ABV76773). The tyrosinase gene from which the LCR is derived is located on chromosome 7 and plays a role in pigmentation. A portion of the full-length LCR sequence, that was found to be deleted in the mutant tyrosinase allele chinchillared Mark which confers a variegated pigmentation phenotype. The full-confined, which confers a variegated pigmentation phenotype. The full-confined into animal call expression constructs to protect against the effects of transgene integration at different locations in the genome. The LCR-consures optimal expression (as regards time, place and quantity), associated with integration at different chromosomal locations, and ensures optimal expression (as regards time, place and quantity).

CC regardless of the site of integration. The present sequence represents a mutant LCR designated LCRmut which retains a protective effect against variable transgene expression. This sequence is dentical to the full-length LCR, apart from deletion of a 62 bp enhancer (denoted as Box AB in the specification) between bases 2622 and 2683 of the full-length LCR, apart from deletion of a 62 bp enhanced the full-length LCR, spart from deletion of a 62 bp enhanced the full-length LCR, spart from deletion of a 62 bp enhanced content and procession variable transgene expression variable transgene expression variable transgene expression variable transgene content of the full-length LCR shown on pages 54-55 (ABV76777) and the conformation given in claim 4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 946 AGTAGGATATTGAAGTCTCCCACTATTAATGTATTAGATTTCAATTTGTGATTTGAGCATT 1005

                                                                                                                                                                                                                                                                       The invention relates to a 3711 bp region of the mouse tyrosinase gene referred to as the locus control region (LCR, ABV76777) and its functional fragments and analogues (ABV76778 ABV76777), and its gene from which the LCR is derived is located on chromosome 7 and plays a role in pigmentation. A portion of the full-length LCR sequence, that was found to be deleted in the mutant tyrosinase allele chinchillamenteld, which confers a variegated pigmentation phenotype. The full-length LCR, or its functional fragments or analogues may be incorporated into animal cell expression constructs to protect against the effects of transgene integration at different chromosomal locations, and ensures optimal expression (as regards time, place and quantity), regardless of the site of integration. The present sequence represents the lill-length LCR of the mouse tyrosinase gene. In addition to its protective effect against variable transgene expression, this sequence also contains an enhancer element (denoted as Box AB in the specification), however, this enhancer is not required for protection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           12;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  709
                                                                                                                                                                                            DNA segment with insulating activity, useful for reducing the ation of transgene expression, in animal cells, caused by integration
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   351

                                                                                                                                                                                 8
                                                                                                                                                                                                                                                                       ઠે
                                                                                                                                       The present sequence represents the human KCNQS (also called KCNGQ) gene, which encodes a voltage-gated potassium channel protein. Human KCNQS has ophthalmological, auditory central nervous system (CNS), cardioactive, anticonvulsant, gastrointestinal and muscular active activities. Sequences and methods from the present invention are useful for identifying activators or inhibitors of KCNQS protein. These activators and inhibitors are useful for treating Stargardt-like macular dystrophy, cone-rod dystrophy, Salla disease, age-related macular degeneration, other forms of macular degeneration, deafness, epilepsy, and different forms of neuropsychiatric, heart, gastrointestinal, and muscle disorders stargardt-like macular dystrophy and cone-rod dystrophies are located at
                 Voltage-gated potassium channel KCNQ5 DNA and protein, for identifying inhibitors and activators which can treat e.g. Stargardt-like macular dystrophy, cone-rod dystrophy, Salla disease, deafness, and epilepsy.
                                                                                                 99pp; English

930 807 1047 327 583 643 702 762 818 876 687 987 1107 925 1287 524 ò 셤 g g g 셤 g g ठे g ò 셤 ò 셤 8 ઠે 엄 ઠે g  $\dot{\delta}$ ò g 8 ò ઠે 셤 ઠે ò The invention relates to a nucleic acid (I) comprising a sequence at least 18 bases of a segment of the chemically pretreated DNA of genes associated with metabolism such as DUSP2 (NM 004418). EPHX2 (NM 001979), ODPR (NM 000320), SGSH (NM 000419), SHTZ (NM 001971), SGSH (NM 004173) and TYMS (NM 001971) (all undefined). (I) are useful for diagnosis and therapy of metabolic disease, solid tumours and cancers; as primer oligonouleotides for the amplification of DNA sequences, for detecting the cytosine methylation state and/or single nucleotide polymorphisms (SNPS) in a chemically treated DNA of genes associated with metabolism. An array of (I) is useful for ascertaining genetic and/or epigenetic parameters for the diagnosis and/or single cytosine methylations. The method involves chemically treating genemic cytosine methylations. The method involves chemically treating genemic cytosine methylations. The method involves chemically treating genemic cytosine methylations. The method involves chemically treating genemic cytosine bases which are unmethylated at the 5th-position are such that cytosine bases which are unmethylated at the 5th-position are converted to uracil or another base which is dissimilar to cytosine in chemically pretreated genomic DNA. The genomic DNA is from cells or cellular components which contain DNA, sources of DNA comprising, for chemically pretreated genomic DNA. The genomic DNA is from cells or celluid, tissue embedded in paraffilm such as tissue from eye, inversions and funder, brain, heart, prostate lung, breast or liver, histologic object fully, tissue embedded in paraffilm such as tissue from eye, intestine, brain, heart, prostate lung, breast or liver histologic object solumed to their rombinations. Genetic parameters are in particular cytosine methylations and further chemicall modifications of DNA corpus of genes associated with metabolism. Further epigenetic parameters include for e.g. the acceptation of histones which correated methylation of histones which corrected to inverted G; 3296 T; 0 U; 1 Other; C; 1482 Sequence 6207 BP; 1298 A; 130

```
The present invention relates to methods of diagnosing breast cancer in a patient, which comprise detecting the level of expression in a tissue sample of two or more genes salected from those shown in ABT09867-
ABT1112, where a differential expression of the genes indicates breast cancer. The methods are useful in diagnosing, treating, detecting the progression, and in monitoring treatment of breast cancer in patients.
The methods are also useful as a coreening tool for agents that modulate the onset or progression of breast cancer. The breast cancer genes may be the onset or progression of breast cancer. The breast cancer genes may be useful as diagnostic markers for the prediction or identification of the malignant state of breast tissue, for confirming the type and progression of cancer, and for drug screening and assays. The present sequence is a coding sequence of the invention. Note: The sequence data for this patent electronic format directly from WIPO at the privation of the print from WIPO at the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the privation of the priva
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            21086
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                21260 AGAATGTATATTGTGTTGTTGTTGGGGTCTGTAAATATCTGTTAAGTACATTTGTTACAA 21319

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               988
The present sequence represents the human KCNQ5 (also called KCN6q) gene, which encodes a voltage-gated pocassium channel protein. Human KCNQ5 has ophthalmological, auditory, central nervous system (CNS), cardioactive, anticonvulsant, gastrointestinal and muscular active activities. Sequences and methods from the present invention are useful for identifying activators or inhibitors of KCNQ5 protein. These activators and inhibitors are useful for treating Stargardt-like macular dystrophy, cone-rod dystrophy, Salla disease, age-related macular degeneration, other forms of macular degeneration, deafness, epilepsy, and different forms of metropsychiatric, heart, gastrointestinal, and muscle disorders. Stargardt-like macular dystrophy and cone-rod dystrophies are located at
                                                                                                                                                                                                                                                                                                                                                                                                   411
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      471

The invention relates to recombinant carcinoma associated (CA) nucleic acid sequences from mouse and human (ADA01482-ADA0094), and to recombinant carcinoma associated proteins (CAP) encoded by them. The invention also encompasses expression vectors and host cells comprising a invention also encompasses expression vectors and host cells comprising to blinds to the protein, and a blochip comprising CA nucleic acid or card the sequences of the invention were identifically card conceptual the sequences of the invention were identified using on cogenic retroviruses, which insert into the genome of the host organism at random. Many of these do not carry transduced host oncogenes or pathogenic trans-acting viral genes, meaning that cancer incidence is a direct consequence of the effects of proviral integration into host protooncogenes. The CA nucleic acid sequences can be used to diagnose carcinoma (especially breast cancer, prostate cancer, lymphoma or a propensity to carcinoma by determination of the sequence cancer, lymphoma or a propensity to carcinoma by determination of the sequence cancer, lymphoma or a propensity to carcinoma and evaluating draid as the stagence represents and in screening and evaluating draid seaful as therrapeutic agents and in screening and evaluating draid suggested the invention. Note: The complete sequence data for this captured the parinted appears to the parinted appears to the parinted appears to the parinted appears to the parinted appears to the parinted appears to the parinted appears to the parinted appears to the parinted appears to the parinted appears to the parinted appears to the parinted appears to the parinted appears to the parinted appears to the parinted appears to the parinted appears the complete sequence data for this in electronic format directly from MIPO at Mouse; murine; carcinoma associated; oncogene; carcinoma; cancer; breast; prostate; lymphoma; leukaemia; cytostatic; gene therapy; drug screening; gene; ds.
